MINOX/ELCAN has a unique Toll Processing Facility located in Mamaroneck, New York. Our Screening capability affords many customers the option of sending any quantity of material to be separated on either the Kroosh Multi-Frequency Screener or the Minox Tumbler Screener.

Our Toll Processing Systems can assist customers with testing and developing new products in our lab. We also provide cost effective processing of low volume or difficult to produce products. Kroosh and Minox technology can separate complex materials such as very fine powders, sticky products, and delicate agglomerates and yield more than most conventional screeners with the ability of screening down to 10 micron.

Tolling is another opportunity for customers to achieve success without being capital committed.

For more information, please do not hesitate to contact us at (914) 381-7500.
